

Asset 5:

All Assets in Scene:

For my 5th asset, I've decided to do the grassy terrain for the scene with the castle wall-looking checkpoint. First, I've decided to make the terrain out of a cube. Then, I increased its width and length evenly and make it bigger than the width of the checkpoint, so that it would be on solid ground. After that, I've made some soft selections on different areas of the terrain to pull them up and make them in the form of hills. Then, I've exported the objects into an fbx file and uploaded them to Sketchfab. I had to recover the materials I used, though. But they were simple enough to decipher. After publishing the scene, it was embedded with this link:
